

Giving Miami the Chills

Chili's®

Keeping the love for a brand warm by revitalizing a familiar space with fresh new finishes.

Florida International University in Miami had a problem with their anchor restaurant: it was ready for a refresh. Nvironment was called in to give a new feel to the campus Chili's®. We started by reworking the entire floorplan—and nothing was spared. The name of the game was to be as unique as possible, so we brought a new ocean-blue and sunny yellow palate to the show.

To take advantage of the sprawling patio, we installed a new covered dining area with ceiling fans to keep diners feeling fresh in the Miami heat. Inside, a wrap-around bar with custom soffit offset the open floorplan. Diners are greeted with a large Miami skyline mural at the entrance and FIU graphics were sprinkled throughout the rest of the space to keep things collegiate.

No environment is too hot or too cold for our collaboration. See more ways we make the impossible possible at nvironmentdesign.com.
